N5193A¹ UXG Agile Signal Generator

10 MHz to 20 or 40 GHz

Definitions and Conditions

Specification (spec): represents warranted performance of a calibrated instrument that has been stored for a minimum of 2 hours within the operating temperature range of 0 to 55 °C, unless otherwise stated, and after a 1 hour warm-up period. The specifications include measurement uncertainty. Data represented in this document are specifications unless otherwise noted.

Typical (typ): describes additional product performance information. It is performance beyond specifications that 80% of the units exhibit with a 95% confidence level at room temperature (approximately 25 °C). Typical performance does not include measurement uncertainty.

Nominal (nom): describes the expected mean or average performance, or an attribute whose performance is by design, such as the 50 Ω connector. This data is not warranted and is measured at room temperature (approximately 25 °C).

Measured (meas): describes an attribute measured during the design phase for purposes of communicating expected performance, such as amplitude drift vs. time. This data is not warranted and is measured at room temperature (approximately 25 °C).

All of the above apply when using the instrument in its default settings unless otherwise stated.

This data sheet provides a summary of the key performance parameters for the N5193A UXG Agile Signal Generator. All options referenced in this data sheet are described in the UXG configuration guide (5992-1116EN).

Unless otherwise noted, this data sheet applies to units with serial numbers ending with 5646xxxx or greater and firmware revision A.01.86.

Specifications

Frequency

Range			
	Specified range	Tunable range	
Option 520	10 MHz to 20 GHz	10 MHz to 21.5 GHz	
Option 540	10 MHz to 40 GHz	10 MHz to 40 GHz	
CW frequency resolution			
Standard	10 kHz		
Option FR1	0.001 Hz		
Frequency switching modes			
Phase continuous switching	Minimizes phase changes	and spectral splatter when transitioning to a new frequency within a band.	
Phase coherent switching		frequency, returns to the prior phase trajectory at that frequency, assuming s. Some temporary amplitude and phase changes may occur during transitions.	
Phase offset			
	Adjustable in 0.1° increme	ents (nom)	
Accuracy			
	Accuracy is equivalent to	the internal or external frequency reference in use.	
	Choices are the internal timebase reference oscillator, the external reference input, the system sync		
	input, and the 6 GHz inpu	t.	
Internal timebase reference oscillator			
Initial calibration accuracy	$\pm 5 \times 10^{-8}$		
Aging rate ¹	$\pm 3 \times 10^{-8}$ /year or $\pm 2.5 \times 10^{-10}$ /day after 30 days		
Temperature effects	$\pm 4.5 \times 10^{-9}$ (nom) from 0	\pm 4.5 \times 10 ⁻⁹ (nom) from 0 to 55 °C	
Electronic frequency control (EFC) sensitivity	–0.04 ppm/V (nom) from –10 V to +10 V		
External 10 MHz reference input			
Frequency	10 MHz		
Modes	Manually or automatically	selected	
Lock range	± 1.0 ppm (nom)		
Input amplitude	6 dBm ± 6 dB (nom). To optimize phase noise use 6 dBm ± 2 dB (nom)		
Input impedance	50 Ω (nom)		
Other reference choices			
System sync in/out	See the Synchronization Section		
6 GHz in/out	See the Synchronization Section		
Reference output (10/100 MHz output)			
Frequency	10 MHz or 100 MHz, user selectable		
Amplitude	7 dBm (nom) into 50 Ω load		

^{1.} Not verified by Keysight N7800A TME Calibration and Adjustment Software. Daily aging rate may be verified as a supplementary chargeable service, on request.

Frequency Bands (Frequency Mode A, Default)

- 1. In Option 520, the 18.8 to 21.5 GHz band behaves like it is part of Region A5.
- 2. In Option 540, the 18.8 to 21.5 GHz band behaves like it is part of Region A6.

Frequency Bands (Frequency Mode B)

1. In Option 520, the 18.8-21.5 GHz band behaves like it is part of Region A5. In Option 540, the 18.8-21.5 GHz band behaves like it is part of Region A6.

Frequency band overview	
Default bands (Mode A)	Provide lowest harmonics and spurious signals.
42.2 to 1980 MHz band (Mode B)	Provides wider bandwidth at low frequencies for wider chirps, wider FM, and better pulse shape.
338 to 2610 MHz band (Mode B)	Provides wider bandwidth at low frequencies for wider chirps, wider FM, and better pulse shape.
	Reduces pulse video feedthrough.

Power

Dual attenuator specified frequency range	(Option AT2)		
	Option 520	Option 540	
Electronic agile attenuator	10 MHz to 20 GHz	10 MHz to 40 GHz	
Mechanical step attenuator	10 MHz to 20 GHz	10 MHz to 40 GHz	
Dual attenuator step size (Option AT2)			
Electronic agile attenuator	0 dB to 65 dB in 5 dB st	eps, for frequencies up to 40 GHz, or bypa	ssed
Mechanical step attenuator	0 dB to 85 dB in 5 dB st	eps, for frequencies up to 40 GHz	
Maximum output power (Option 520)			
Frequency	Standard	Option AT2	Option AT2 ¹
		Electronic attenuator bypassed	Electronic attenuator inline
10 MHz to 13 GHz	10 dBm	10 dBm	–1 dBm
> 13 GHz to 18 GHz	10 dBm	10 dBm	-4 dBm
> 18 GHz to 20 GHz	10 dBm	10 dBm	-6 dBm
Maximum output power (Option 540)			
Frequency	Standard	Option AT2	Option AT2 ¹
		Electronic attenuator bypassed	Electronic attenuator inline
10 MHz to 13 GHz	10 dBm	8 dBm	-3 dBm
> 13 GHz to 18 GHz	10 dBm	8 dBm	-5 dBm
> 18 GHz to 20.55 GHz	7 dBm	6 dBm	–10 dBm
> 20.55 GHz to < 25.6 GHz	10 dBm	10 dBm	–7 dBm
25.6 GHz to 32 GHz	7 dBm	6 dBm	-8 dBm
> 32 GHz to 40 GHz	7 dBm	7 dBm	–7 dBm

^{1.} Note that during EW simulations using option AT2 agile power capability, these are the maximum power values available in the agile power range. Bypass mode is not recommended for EW simulations that require > 20 dB agile power capability, as the mechanical switches used to switch between bypass and inline modes can take as long as 20 ms (nom) to change modes.

Minimum settable output power			
Frequency	Standard	Option AT2 Electronic attenuator bypassed	Option AT2 Electronic attenuator inline
10 MHz to 20 GHz	–10 dBm	-95 dBm	–130 dBm
> 20 GHz to 40 GHz (Option 540)	–10 dBm	-95 dBm	–130 dBm
Agile power range

> 18 to 20.55 GHz	17 dB (nom)	20 dB (nom)	90 dB (nom)
> 20.55 to < 25.6 GHz	20 dB (nom)	10 dB (nom)	80 dB (nom)
25.6 GHz to 40 GHz	17 dB (nom)	10 dB (nom)	80 dB (nom)
Leveling modes			
ALC on	Internal power leveling		
ALC off ¹	No power leveling		
ALC off with power alignment	Power alignment is a routine that improves level accuracy with ALC off. It aligns the power level with ALC off to match the power level with ALC on at a customer specified power level. It should be run at regular intervals and whenever the operating temperature changes \pm 5 °C from the alignment temperature.		
RF Gating			
Turns RF power on/off with external trigger			

Turns RF power on/off with external trigger

^{1.} For EW simulations using option AT2 agile power capability, it is strongly recommended to operate with ALC mode off after running power alignment. If ALC mode is left on, switching speed performance will be significantly reduced.

	with the mechanical step atter		etronic attenuator inline.	

Specifications shown represent uncorrected performance at the RF output port. Level accuracy at the DUT input can be significantly improved by running the UXG user amplitude correction routine with a power sensor.

 \pm 1.8 dB (typ) for relative power from 0 to -60 dB \pm 2.2 dB (typ) for relative power from -60 to -65 dB

- Specifications apply after running power alignment at +4 dBm power level. It is strongly recommended that EW simulations be performed with ALC mode off after running power alignment. If ALC mode is left on, switching speed performance will be significantly reduced.
- The Power Alignment routine aligns ALC off level accuracy performance to ALC ON performance at a customer specified power. It should be run at regular intervals, and whenever the operating temperature changes ± 5 °C from the alignment temperature. For optimal performance in applications where the instrument will be used at more than one power level, execute power alignment at a power level < 5 dBm and with the output attenuation set to the desired operating condition.
- For frequencies > 17 to 20 GHz, level accuracy degrades by an additional 0.5 dB.

^{1.} For units with s/n 5646xxxx or greater, typical option SS1 type 4 switching speed is 4 μ s. 2. When using the CC1 interface card for Fast CW switching, Option FR1 is required.

Additional contributors to switching	ng speed
With GPIB, LAN, or USB control	Add 900 µs (nom) from receipt of SCPI command or trigger signal.
With Opt AT2 attenuators	Add 20 ms (nom) for any change in the mechanical attenuator or bypass switch. These are controllable via GPIB,
	LAN, or USB. These are not controllable via list or fast control port (Options CC1, CC2, CC3, or CC4).
For frequencies in Region A0	Add 1 µs (nom) when switching to or from any frequency in Region AO.

Measured to phase settled within 0.1 radians of final phase.
Measured to phase settled within 0.2 radians of final phase.
Measured to phase settled within 0.3 radians of final phase.
Measured to amplitude settled within 1 dB of final amplitude.

Synchronization

Multiple UXG units can be synchronized together to have phase coherent outputs. This is useful for simulating angle-of-arrival (AoA) and phased array antenna wavefronts.

is fed into its own 6 GHz input. Synchronization output connections 10/100 MHz output Provides a basic external reference at 10 MHz or 100 MHz. Achieves better spectral purity than the system sync output. +6.4 dBm minimum (nom). See the Rear Panel Connectors Section for connection details. RF sync output Recommended external reference output for use in system environments where trigger jitter and phase stability are important. Normally provides a 250 MHz output, but other frequencies are available. +10.4 dBm minimum (nom). See the Rear Panel Connectors Section for connection details. 6 GHz output Provides high phase stability synchronization between multiple signal generations. +15 dBm minimum (nom). See the Rear Panel Connectors Section for connection details. System sync input Frequency 1 to 250 MHz in 1 MHz steps. Default value is 250 MHz. Lock range ± 1.0 ppm (nom) Amplitude 6 dBm ± 6 dB (nom). To optimize phase noise use 6 dBm ± 2 dB (nom). Input impedance 50 Ω (nom) Usage The input frequency is not auto-detected. It must be entered manually and must be accurate to within the lock range above. RF sync output Frequency 10 MHz, 100 MHz, or 250 MHz, selectable. Multi-box synchronization overrides this selection and may use othe frequencies. Amplitude 12 dBm (nom) Output impedance 50 Ω (nom) 6 GHz input frequency 6 GHz Lock range 11.0 ppm (nom) Marpitude 11 dBm ± 6 dB (nom) Usage This input must be connected to the 6 GHz output (described below) or a similar output from another compatible signal generator. The signal generator will not function without a 6 GHz signal at this input. 6 GHz output Frequency 6 GHz Amplitude 17 dBm (nom) Output impedance 50 Ω (nom) Usage A rigid jumper cable is provided to connect the 6 GHz output to the 6 GHz input. The jumper can be removed to distribute this signal to other equipment. When distribution amplifiers are required. Normal mode

Normal mode is optimized for maximum update rate (throughput). If the fast control port (FCP) Option CC1, CC3, or CC4 is installed, it provides the capability to use pulse descriptor words (PDWs) to control frequency, amplitude, phase, pulse (include chirp or phase coding), and FM or Φ M. With CC1, the PDW is streamed into the rear-panel FCP 100-pin connector using 46-bit wide control words. The control word information is executed synchronously upon receipt of a trigger.

Fast CW mode

Fast CW mode is optimized for minimum latency. The FCP control over signal attributes is limited to CW frequency switching and the addition of FM/ΦM provided this option was purchased. It is typically used with the FCP Option CC2 for compatibility with instruments used in legacy test systems. When using the CC1 interface card, Option FR1 is required.

PDW Streaming mode

Streaming provides agile control of most of the instrument settings via a continuous stream of PDWs transferred from the internal SSD or an external source, such as a LAN or the Fast Control Port (with Option CC3 or CC4). The set of parameters controlled by Streaming include frequency, frequency band map, band adjust, relative power, phase, phase mode, pulse width, pulse start time, FM (chirp) and PM (phase coding). Each PDW consists of seven 32-bit words. The streaming PDW parameters are executed asynchronously, based on the time stamp information contained within the PDW. Option PM1 is required to stream.

From file on solid state drive (SSD)	
PDW streaming rate	750 k pulses/s (nom)
Over LAN port	
PDW streaming rate	750 k pulses/s (nom)
Over fast control port (FCP) (Options C	CC3/CC4)
PDW streaming rate	6 M pulses/s (nom)
Over CC4 10 GbE LAN interface 1	
PDW Streaming Rate	6 M pulses/s (nom)
Triggering	
PDW streaming trigger	Auto, external, single, SCPI, timer, or trigger key
PDW streaming trigger types	Play, abort, or cancel
Time accuracy	
Pulse start time accuracy/resolution	40 ps (typ)/10 ps
Pulse fine delay accuracy/resolution	40 ps (typ)/10 ps

List mode

List mode lets you play out a list of PDW's located in and read from the instrument's FPGA memory. The memory contains a series of list points where each list point contains multiple signal attributes. This mode supports dynamic sequencing using the external trigger ports.

Operating modes	
	List of frequency, phase, amplitude, pulse, chirp, and modulation parameters such as Barker codes.
Timing	
Uniform timer	
Standard	Advance every 100 μs to 34 s
Option SS1	Advance every 1 μs to 34 s
Option SS4	Advance every 48 ns to 34 s
Dwell timer	
Standard	Advance every 100 μs to 17 s
Option SS1	Advance every 1 μs to 17 s
Option SS4	Advance every 48 ns to 17 s
Number of points	
Arbitrary list	1 to 500,000 per table assuming 50 sequences
	Lists and sequences share the same memory

1. Typically requires driving the PDWs via a compiled language program.

Triggering	
Point trigger	Auto, external, single, SCPI, timer, or trigger key
List trigger	Auto, external, single, SCPI, timer, or trigger key
Sequence trigger	Auto, external, single, SCPI, timer, or trigger key
Markers	
Marker types	List, sequence, point
Number of configurable markers	Up to 12, 8 simultaneously
Settable marker parameters	Polarity, delay

Spectral purity

Harmonics

Measured at +10 dBm or maximum specified power, whichever is lower. Performance is unspecified for harmonics beyond the specified frequency range.

Fundamental frequency	Harmonic level
10 MHz to 2.61 GHz (Frequency Mode B)	-25 dBc (typ)
10 MHz to 1 GHz (Frequency Mode A)	-40 dBc
> 1 GHz to 2 GHz (Frequency Mode A)	-50 dBc
> 2 GHz (Frequency Mode A and B)	-55 dBc

Sub-harmonics

Measured at +10 dBm or maximum specified power, whichever is lower. Sub-harmonics are defined as Carrier Freq *(x/N), where N indicates the frequency multiplication number and X is an integer value that is not an integer multiple of N. Does not apply to non-harmonic spurs which may overlap with sub-harmonics. Performance is unspecified for sub-harmonics beyond the specified frequency range.

Fundamental frequency	1/2, 3/4, and 3/2 sub-harmonics	Other sub-harmonics	N	
0.01 to < 1.43 GHz	None	None	1	
1.43 to < 2.85 GHz	-75 dBc	-80 dBc	2	
2.85 to < 5.7 GHz	-75 dBc	-80 dBc	4	
5.7 to < 11.4 GHz	–75 dBc	-80 dBc	8	
11.4 to < 16 GHz	-70 dBc	-80 dBc	16	
16 to 20 GHz	-65 dBc (typ)	–70 dBc (typ)	16	
> 20 to < 22.8 GHz (Opt 540)	–70 dBc (typ)	–70 dBc (typ)	16	
22.8 to 38 GHz (Opt 540)	–70 dBc (typ)	–70 dBc (typ)	32	
> 38 to 40 GHz (Opt 540)	-62 dBc (typ)	–70 dBc (typ)	32	

Non-harmonics

Measured in Frequency Mode A at +10 dBm or maximum specified power, whichever is lower. Performance is unspecified for non-harmonics beyond the specified frequency range.

Fundamental frequency	Offsets > 300 Hz excluding Power-line related	Power-line related using external 10 MHz input	Power-line related using System Sync input
0.01 to < 1.43 GHz	–70 dBc (typ)	-60 dBc (typ)	-60 dBc
1.43 to < 2.85 GHz	–70 dBc (typ)	-60 dBc (typ)	-60 dBc
2.85 to < 5.7 GHz	-70 dBc (typ)	-50 dBc (typ)	-60 dBc
5.7 to < 11.4 GHz	-70 dBc (typ)	–50 dBc (typ)	-60 dBc
11.4 to < 18 GHz	–70 dBc (typ)	–50 dBc (typ)	-60 dBc
18 to 20 GHz	-70 dBc (typ)	-50 dBc (typ)	
> 20 GHz (Opt 540) ¹	-65 dBc (typ)	-45 dBc (typ)	
Broadband noise			

In CW mode at +10 dBm or maximum specified output power, whichever is lower, for offsets > 10 MHz.

Frequency	Broadband noise		
10 MHz to 20 GHz	-131 dBc/Hz (typ)		
> 20 GHz to 40 GHz (Opt 540)	-125 dBc/Hz (typ)		

^{1.} At precisely 22 GHz, several spurs coalesce and may add to -60 dBc. Moving 1 Hz away from 22 GHz avoids this issue.

Phase noise

11.4 to 20 GHz

> 20 GHz (Opt 540)

Phase noise is measured using a CW signal at +10 dBm or maximum specified power, whichever is less, with spur optimizations off. Phase noise specifications exclude external mechanical vibration.

Pulse modulation (Option PM1)

For frequencies from 400 MHz to 1.43 GHz, pulse modulation specifications apply in Mode B only. For frequencies below 400 MHz, pulse modulation is not specified.

Pulse types	
External input	The RF pulse width is the same as the input pulse width at the pulse/trigger gate input connector.
Triggered	The internal pulse generator is triggered by a selectable trigger source. The pulse delay and width are settable.
List mode	The pulse parameters are defined in a list.
Streaming mode	The pulse parameters are defined in the streamed PDW data.
Free run	The internal pulse generator generates pulses with the specified parameters without waiting for a trigger.
On/off ratio	
0.4 to < 4.2 GHz	80 dB (90 dB typ)
4.2 GHz to 20 GHz	90 dB
> 20 GHz (Option 540)	80 dB (90 dB typ)
Rise/fall times	
0.4 to < 1.43 GHz	(6 ns typ)
1.43 to < 2.85 GHz	10 ns (6 ns typ)
≥ 2.85 GHz	10 ns (3 ns typ)
Minimum pulse width	
ALC on	50 ns
ALC off	10 ns
Minimum pulse repetition interval	
ALC on	60 ns
ALC off	20 ns

Time accuracy	
Pulse start time accuracy/resolution	40 ps (typ)/10 ps
Pulse fine delay accuracy/resolution	40 ps (typ)/10 ps
Level accuracy (relative to CW)	
For pulse width \geq 100 ns with ALC on and for pulse width \geq 10 ns w	rith ALC off.
0.4 to < 1.43 GHz	± 1 dB (typ)
≥ 1.43 GHz	± 1 dB (typ)
Width compression	
RF width relative to video out	± 5 ns (typ)
Video feed-through	
For frequencies ≥ 400 MHz and output power of 10 dBm or less	10% (typ)
Video delay	
External input to video output	60 ns (meas)
RF delay (video to RF output)	
Frequency > 500 MHz	10 ns (meas)
Pulse overshoot	
	10% (typ)
Input level	
	+1 V = RF on
	0 V = RF off
Input impedance	
	50 Ω (nom)

Measured pulse shape

Frequency = 9 GHz, power = 10 dBm, amplitude = 10 dBm, ALC off, pulse width = 10 ns, pulse period = 100 ns. The oscilloscope is protected by a 10 dB pad and the timescale is set to 2 ns/div.

Chirp and chirped-pulse modulation (Options UNT and PM1)

Option WC1 is required for chirp control through the Option CC1 I/O interface.

Options installed	FCP in normal mode Opt CC1 (LVDS) or Opt CC3/CC4 (10 Gbit Ethernet)	Opt CC2 (BCD)	Streaming mode	Fast CW mode ²	List mode
FMCW Chirp					
UNT	FMCW ¹	FMCW: 16 chirp slope selections	FMCW ¹	FMCW not available	FMCW ¹
Pulse Chirp					
UNT + PM1	LFM within pulse ¹	Chirped pulse not available	LFM within pulse ¹	Chirped pulse not available	LFM within pulse

Note: CW chirp (opt UNT required) and Pulse Chirp (opt PM1 required) are available under the Pulse/Chirp hardkey in all modes except Fast CW mode. Option WC1 is required for wideband modulation, including chirp.

- Capability available with Firmware Revision A.01.70 with Option U03 or later.
 When using the CC1 interface card for Fast CW switching, Option FR1 is required.

Pulse types	
Compatible without jitter	Free-run, synchronously triggered
With ± 8 ns jitter	Asynchronously triggered
Incompatible	External pulse
Pulse and chirp alignment	
	Chirp start time is aligned to pulse start time within ± 50 ns (typ)
Deviation (peak to peak) with Option UNT	
Option 520 cannot chirp beyond 21.5 GHz. (Option 540 cannot chirp beyond 40 GHz.
Frequency	Maximum peak to peak deviation
10 MHz to < 250 MHz	8 MHz
250 MHz to < 8 GHz	256 MHz
8 GHz to < 12 GHz	384 MHz
12 GHz to < 18 GHz	512 MHz
18 GHz to 20 GHz	768 MHz
> 20 GHz to < 26.5 GHz (Option 540)	768 MHz
≥ 26.5 GHz (Option 540)	1024 MHz
Deviation (peak to peak) with Options UNT	and WC1
Option 520 cannot chirp beyond 21.5 GHz. (Option 540 cannot chirp beyond 40 GHz.
Frequency	Maximum peak to peak deviation
50 MHz to 20 GHz	10% of center frequency
> 20 GHz (Option 540)	1.2 GHz
Wider deviations are available when not nea	r a band edge, for example, any chirp which lies within one band is obtainable. See the frequency band
diagrams. Amplitude accuracy may degrade	for wide chirps.
Rate	
Range	10 kHz/μs to 1.3 GHz/ns
Resolution	10 kHz/μs to 0.32768 kHz/ns depending on rate

Internal pulse generator (Option PM1)

Internal nulse generator	
Internal pulse generator	
Modes	Free-run, square, and triggered
Square wave rate	0.1 Hz to 10 MHz with 0.1 Hz resolution (nom)
Pulse period (PRI) (Tp)	30 ns to 42 s, corresponding to repetition frequencies of 0.024 Hz to 33.33 MHz
Minimum pulse width (Tw)	4 ns (nom)
Pulse accuracy	40 ps (typ)
Delay resolution	10 ps
PRI resolution	2 ns
Width resolution	2 ns

Frequency modulation (Option UNT)

	,
Maximum rate	
Internal or external	10 MHz
Maximum peak deviation with Option UNT	
Option 520 cannot deviate beyond 21.5 GHz.	Option 540 cannot deviate beyond 40 GHz.
Frequency	Maximum peak deviation
10 MHz to < 250 MHz	4 MHz
250 MHz to < 8 GHz	128 MHz
8 GHz to < 12 GHz	192 MHz
12 GHz to < 18 GHz	256 MHz
18 GHz to 20 GHz	384 MHz
> 20 GHz to < 26.5 GHz (Option 540)	384 MHz
≥ 26.5 GHz (Option 540)	512 MHz
Maximum peak deviation with Options UNT	and WC1
Option 520 cannot deviate beyond 21.5 GHz.	Option 540 cannot deviate beyond 40 GHz.
Frequency	Maximum peak deviation
10 MHz to 20 GHz	5% of center frequency
> 20 GHz (Option 540)	600 MHz
Wider deviations are available when not near	a band edge, for example, any FM deviation which lies within one band is obtainable. See the frequency band
diagrams. Amplitude accuracy may degrade f	for wide FM.
Resolution	
	0.1% of deviation or 1 Hz, whichever is greater
Deviation accuracy	
Measured at a 1 kHz rate with 100 kHz deviat	tion.
Internal	± 1% of FM deviation (± 0.2% typ)
External In	± 3.5% of FM deviation + 20 Hz
Modulation frequency response (3 dB bands	width)
Measured at 100 kHz deviation.	
DC coupling	DC to 10 MHz (nom)
AC coupling	5 Hz to 10 MHz (nom)
External DC FM carrier offset	
At the calibrated deviation and carrier freque	ncy, within 5 °C of ambient temperature at time of user calibration.
	± 0.1% of set deviation (meas)
Distortion	
Measured at a 1 kHz rate with 100 kHz deviat	tion.
	0.4%
Sensitivity	
	± 1 V _{peak} for indicated deviation
Frequency coding (FSK)	
Number of levels	16 levels, at least 32 maps
Minimum bin width	
Minimum bin width Maximum pattern length	4 ns 65,536 bits/pattern

Phase modulation (Option UNT)

Maximum rate	
Internal or external	10 MHz
Maximum peak deviation in radians	
$\frac{5\% \text{ of carrier frequency}}{\text{modulation frequency}} \text{ or } \frac{600 \text{ MHz}}{\text{modulation frequency}} \text{ or } 12\pi \text{ whichever is less}$	
Resolution	
	0.1% of set deviation
Deviation accuracy	
Measured at a 1 kHz rate with 3π rad deviation.	
Internal	± 1 % of ΦM deviation (± 0.2% typ)
External In	± 3.5% of ΦM deviation
Modulation frequency response (3 dB bandwidth)	
Measured at 3π rad deviation	
DC coupling	DC to 10 MHz (nom)
AC coupling	5 Hz to 10 MHz (nom)
Distortion	
Measured at a 1 kHz rate with 3π rad deviation	
Total harmonic distortion	0.5% (0.1% typ)
Sensitivity	
	\pm 1 V_{peak} for indicated deviation
Phase modulation types	
Triggered BPSK	Phase can be changed 180° on a bin-by-bin basis every 8 ns via an external trigger
Barker coding	
Supported codes	2, 3, 4, 5, 7, 11, 13
Phase coding (PSK)	
Number of levels	16 levels, at least 32 maps
Minimum bin width/resolution	4 ns / 4 ns
Maximum pattern length	65,536 bits/pattern

Amplitude modulation (Option UNT)

AM performance is typical up to 20 GHz with ALC on when AM peaks do not exceed maximum specified power. AM performance is not specified with ALC off or above 20 GHz or when AM peaks exceed maximum specified power.

Maximum depth		
	80% (14 dB)	
Depth accuracy		
ALC on, 1 kHz rate and depth ≤ 80%	± (6% of setting + 1%)	
External input (selectable polarity)		
Sensitivity for indicated depth	1 V _{peak}	
Maximum voltage	±1 V	
Modulation frequency response (3 dB bandwidth) ¹		
Measured at 30% depth		
DC coupling	DC to 10 MHz (nom)	
AC coupling	5 Hz to 10 MHz (nom)	
Distortion		
30% AM, 1 kHz rate	1.5% total harmonic distortion	
60% AM, 1 kHz rate	2% total harmonic distortion	

^{1.} Units without an option AT2 attenuator will have degraded performance.

External modulation inputs (Option UNT)

Connections	Ext1 and Ext2
Modulation types	AM, FM, and ΦM
Input impedance	50Ω , 600Ω , or $1 M\Omega$ (nom) switched

Internal modulation source (Option UNT)

Dual function generators	Provide two independent signals (internal1 and internal2) for use with AM, FM, ΦM, or LF output
Waveforms	Sine, square, positive ramp, negative ramp, triangle, pulse, uniform noise, Gaussian noise
Rate range	
Sine	0.1 Hz to 10 MHz
Square, ramp, triangle	0.1 Hz to 1 MHz
Resolution	0.1 Hz
Accuracy	Same as timebase
LF output	
Output	Internal 1, internal 2, noise generator 1, noise generator 2
	Also provides monitoring of function generators when used for AM, FM, or ΦM
Amplitude	0 to 5 Vpeak (nom) into 50 Ω or 10 V (nom) into 1 MΩ
Output impedance	50 Ω (nom)

Simultaneous modulation

Simultaneous modulation	
All modulation types (FM, AM, ΦM, chirp, and pulse modulation) may be simultaneously enabled except FM with ΦM.	
AM, FM, and ΦM can sum simultaneous inputs from any two sources (Ext1, Ext2, internal1, or internal2).	
Any given source (Ext1 Ext2 internal1 or internal2) may be routed to only one activated modulation type	

Remote programming

Interfaces	GPIB (IEEE-488.2,1987) with listen and talk, USB 2.0, and 1000BaseT LAN interface.
Control languages	SCPI version 1997.0. Code compatibility modes for Aeroflex 2500, 2200, FS2000 or FS5000.
IEEE-488 functions	SH1, AH1, T6, TE0, L4, LE0, SR1, RL1, PP0, DC1, DT0, C0, E2
Keysight IO libraries	Keysight's 10 Library Suite helps you quickly establish an error-free connection between your PC
	and instruments, regardless of the vendor. It provides robust instrument control and works with the
	software development environment you choose.

General specifications

Power requirements	100/120 VAC 50/60/400 Hz or 220/240 VAC 50/60 Hz (automatically selected)
	< 350 W typical, 400 W maximum
Operating temperature range	0 to 55 °C
Storage temperature range	–40 to 70 °C; during storage below –20 °C, instrument states may be lost
Altitude	0 to 4600 m (15,000 ft)
Humidity	Maximum relative humidity (non-condensing): 95%RH up to 40 °C, decreases linearly to 45%RH at 55 °C 2
Environmental testing	Samples of this product have been tested in accordance with the Keysight Environmental Test
	Manual and verified to be robust against the environmental stresses of storage, transportation,
	and end-use. Those stresses include but are not limited to temperature, humidity, shock, vibration,
	altitude, and power line conditions. Test methods are aligned with IEC 60068-2 and levels are similar
	to MIL-PRF-28800F Class 3. Phase noise specifications are not warranted in a vibrating environment.
ISO compliant	This family of signal generators is manufactured in an ISO-9001 registered facility in concurrence
	with Keysight's commitment to quality.
EMC	Conforms to the immunity and emission requirements of IEC/EN 61326-1 including the conducted
	and radiated emission requirements of CISPR Pub 11/2009 Group 1, Class A.
Acoustic noise	Normal: 48 dBA (nom)
	Worst case: 68 dBA (nom)
Storage	Memory is shared by instrument states and sweep list files.
	The solid-state drive initially has at least 512 GB of free space ¹ .
Security	Display blanking
	Memory clearing functions (See Application Note, "Security Features of Keysight Technologies Signal
	Generators," Part Number E4400-90621).
	Removable Solid State Drive (SSD) with all user data.
Self-test	Internal diagnostic routine tests most modules in a preset condition. If node voltages are within
	acceptable limits, then the module passes the test.
Weight	< 25 kg (54 lb.) net
	< 34 kg (73 lb.) shipping
Dimensions	134 mm H x 426 mm W x 559 mm D (5.25" H x 16.8" W x 22.0" D)
Recommended calibration cycle	12 months

^{1.} Instruments with s/n 53310101 to 58039999 (shipped prior to March 9, 2018) have 480 GB capacity. 2. From 40 °C to 55 °C, the maximum % Relative Humidity follows the line of constant dew point.

Input/Output Descriptions

Front panel connectors

Unless otherwise noted, all connectors are BNC female, digital inputs and outputs are 3.3 V CMOS, and digital inputs will accept 5 V CMOS, 3 V CMOS, or TTL voltage levels. Option 1EM moves all connectors to the rear panel except the USB connectors.

RF output	Output impedance 50 Ω (nom)
Option 520	Standard: Precision APC-3.5 male; plus 3.5 to 3.5 mm female adapter
	Option 1ED: Type-N female; plus Type-N male to SMA female adapter
Option 540	Precision 2.4 mm male; plus 2.4 to 2.4 mm and 2.4 to 2.9 mm female adapters.
USB 2.0 primary (2 ports)	Allows control of USB devices. USB Type-A female connector. Nominal output current 0.5 A.
LF output	Outputs the internally generated LF source. Nominal output impedance 50 Ω .
External input 1	Drives either AM, FM, or Φ M . Nominal input impedance is 50 Ω , 600 Ω , or 1 M Ω , selectable. Damage levels are 5 V_{rms} and 10 V_{peak} .
External input 2	Drives either AM, FM, or Φ M . Nominal input impedance is 50 Ω , 600 Ω , or 1 M Ω , selectable. Damage levels are 5 V_{rms} and 10 V_{peak} .
Pulse/trigger gate input	Accepts input signal for external pulse modulation. Also accepts external trigger pulse input for internal pulse modulation. Nominal impedance 50 Ω . Damage levels are 5 V_{rms} and 10 V_{peak} .
Pulse video out	Outputs a signal that follows the RF output for internal pulse modes. TTL-level compatible. Nominal source impedance 50 Ω .
Pulse sync out	Outputs a synchronizing pulse, nominally 50 ns width, for internal pulse modes. TTL-level compatible, nominal source impedance 50Ω .

Rear panel connectors

Unless otherwise noted, all connectors are BNC female, digital inputs and outputs are 3.3 V CMOS, and digital inputs will accept 5 V CMOS, 3 V CMOS, or TTL voltage levels. Option 1EM moves the front panel connectors to the rear panel except the USB connectors.

GPIB	Operates as a GPIB controller or device. IEEE-488 bus connector.
LAN (1000 BaseT)	Allows LAN TCP/IP communication. RJ45 Ethertwist connector. The LAN connector provides the same SCPI remote
L/11 (1000 Dasci)	programming functionality as the GPIB connector. The LAN connector is a used to access the internal web server and FTP
	server. The LAN supports DHCP, HiSLIP, sockets SCPI, VXI-11 SCPI, connection monitoring, dynamic hostname services,
	and TCP keep alive. This interface is LXI class C compliant.
USB 2.0 primary (2 ports)	Allows control of USB devices. USB Type-A female connector. Nominal output current 0.5 A.
USB 2.0 secondary (1 port)	Receives control from USB host. USB Type-B female connector. Nominal output current 0.5 A.
PCIe x8	Provides 8 lanes of PCIe I/O. Reserved for future use.
10 MHz input	Accepts a 10 MHz external reference (timebase) input. Nominal input impedance 50 Ω. Nominal input range 0 to 12 dBm.
10/100 MHz output	Provides a reference signal of 10 MHz or 100 MHz, selectable. Nominal output impedance 50 Ω. Output power is +7 dBm
	nominal. Suitable for use with the 10 MHz input or System Sync input of another compatible signal generator.
10 MHz EFC	Accepts an external DC voltage, ranging from -10 V to +10 V, for electronic frequency control (EFC) of the internal 10 MHz
	reference oscillator. This voltage inversely tunes the oscillator about its center frequency. See the EFC sensitivity in the
	frequency section. The nominal input impedance is greater than 1 $M\Omega$.
System sync input	Accepts an external reference input. The acceptable frequencies are listed in the synchronization section. Nominal input
	impedance 50 Ω , with a DC block. Nominal input range 0 to 12 dBm.
RF sync output	Provides an external reference output of 10, 100, or 250 MHz, or Sync Output, selectable. Nominal output impedance
	50 Ω. Nominal output power 12 dBm. Suitable for use with the System sync input. This output is a square wave with a fast
	rise time. To avoid electromagnetic interference, use coaxial cable with at least 90 dB shielding effectiveness. Example:
	Times Microwave Systems LMR 240 coaxial cable used in Amphenol PN 115101-22-48.00 BNC cable assembly. Output
	power is +11 dBm nominal.
6 GHz input	SMA female connector. Accepts a synchronization input of 6 GHz. Nominal input impedance 50 Ω . Nominal input range 5 to
	17 dBm. Damage levels are above +23 dBm.
6 GHz output	SMA female connector. Provides a synchronization output of 6 GHz. Nominal output impedance 50 Ω . Output power is + 15
	dBm nominal. Suitable for use with the 6 GHz input.
Triggers 1-14	Number of trigger varies depending on which option is installed (CC1, CC2, CC#, or CC4). These use 3.3V CMOS levels and
	are tolerant to 5V inputs. The output impedance is 50 Ω and the input is high impedance.

Fast Control Port (FCP) interface modules

On the trigger and marker connectors, digital inputs and outputs are 3.3 V CMOS, and digital inputs will accept 5 V CMOS, 3 V CMOS, or TTL voltage levels.

Option CC1 I/O interface	100 1 1170
Data port	100 pin LVDS
Triggers and markers	$2 \text{ SMA}_{(f)}$ and $12 \text{ SMB}_{(m)}$
Data format	Binary
Controllable parameters	Frequency, amplitude, phase, phase coding, band, pulse, chirp, FM deviation, ΦM deviation, depending on installed options
Option CC2 I/O interface	
Data connector	50 pin
Triggers and markers	2 SMA _(f)
Data format	Binary coded decimal (BCD)
Controllable parameters	Frequency, FM deviation, or 16 Chirp rates
Option CC4 I/O interface	
Data ports	2 SFP+ transceivers
Triggers and markers	2 SMA(f) bidirectional and 12 SMB(m) (7 bidirectional plus 5 duplicate output-only ports)
Data format	Keysight data streaming protocal (KDSP)
Controllable parameters	Frequency, amplitude, phase, phase coding, band, pulse, chirp, FM deviation, Φ M deviation,
	depending on installed options

Rear panel of N5193A

Performance Archive

From time to time, Keysight Technologies may make changes to instrument performance. Details on the specifications and performance differences of earlier versions summarized below can be found in the N5193A data sheet archive found in the UXG online documentation at http://www.keysight.com/main/editorial.jspx?cc=US&lc=eng&ckey=2550695&nid=-32491.1150339.00&id=2550695.

Solid state drive (SSD) capacity was increased from 80 GB to 480 GB on instruments with $s/n \ge 53310101$, shipped after July 30, 2015. SSD capacity was again increased from 480 to 512 GB on instruments with $s/n \ge 5804xxxx$, shipped after March 9, 2018.

Option AT2 replaced the previous attenuator option AT1 on instruments with $s/n \ge 5646xxxx$. Option AT2 offers improved performance in the 25.6 to 40 GHz range. Option AT1 performance specifications can be found on pages 7 to 10 in the N5193A data sheet dated June 8, 2016.

Option SS4 replaced the previous switching speed option SS2 on instruments with $s/n \ge 5646xxxx$. Option SS4 offers improved performance for Type 4 frequency transitions. Option SS4 performance specifications can be found on page 11 in the N5193A data sheet dated June 8, 2016.

Option CC4 replaced the previous option CC3 10 GB Ethernet I/O card. Option CC4 is a form/fit/functional replacement for CC3 and offers additional triggering ports.

Option U01 added support for triggered BPSK with firmware version A.01.40.

Option U02 added support for CW Chirp with firmware revision A.01.60.

Option U03 enabled narrowband chirps in List, FCP, and Streaming mode without requiring options WC1 or WC2 for full frequency range with firmware revision A.01.70.

Option U04 added the ability to play non-linear chirps (MESG waveforms only) and increased Chirp Rate resolution when using CC1 rear-panel board with firmware revision A.01.75.

The latest Uxx option can be obtained by ordering N5193AU Option R2C.
